Request for Information (RFI) and Sources Sought

Title: Digital Repository Platform and Physical Library Management System

NAICS Code: 541512: Computer Systems Design Services; 519210 Libraries and Archives

Product Code: R499**:** Support- Professional: Other

Issuing Entity: Department of Transportation | Pipeline Hazardous Materials Safety Administration

Date of Issue: October 20, 2026, **Submissions by:** November 16, 2026, 11:00 am

1. Introduction and Purpose

The Pipeline and Hazardous Materials Safety Administration is seeking information from interested parties and potential vendors and systems integrators to implement a web-based Digital Repository (Virtual Library) Platform integrated with specialized Physical Library Management functionality. The primary purpose of this platform is to serve as a centralized hub providing standardized access to industry consensus standards, regulatory documentation, and reference literature applicable to LNG facility safety. The platform should allow access through IP verification or username/password, support concurrent users, and not require any additional software to be installed on the user's computer or server.

The solution must seamlessly handle distinct tier-based access controls across geographically dispersed stakeholder groups, support concurrent platform usage, enforce digital rights management (DRM), track visitor engagement, and provide administrative reporting for PHMSA management.

2. Organization and User Community Overview

The platform will support four primary user communities, each with specific operational workflows and geographic requirements:

- **Department of Transportation (DOT) Inspectors/Employees:** Requires high-availability virtual access from anywhere within the United States. Users must be capable of viewing and downloading approved repository assets (subject to publisher permissions).
- **Non-DOT Federal and State Inspectors/Employees**: Requires high-availability virtual access from anywhere within the United States. Users must be capable of viewing and downloading approved repository assets (subject to publisher permissions).
- **External non-Federal Users:** Virtual access granted in a strictly controlled, read-only format for reference and educational purposes.

- **McNeese State University (McNeese) Students:** On-site access granted in a strictly controlled, read-only format. File downloading or local duplication must be restricted by default.
- **PHMSA Administrative (PHMSA Admin) Staff:** Full administrative rights to manage assets, enforce permissions, process physical book requests, monitor visitor logs, and generate analytics reports.

3. Scope of Work and Detailed Technical Specifications

3.1 Core Digital Repository and Asset Management

- **Centralized Asset Repository:** Ability to index, organize, catalog, and store diverse document formats (PDFs, technical manuals, regulations, video/multimedia files). See Appendix A.
- **Advanced Search and Indexing:** Full-text indexing, metadata tagging, faceted search filters (e.g., author, date, publication type, regulatory body), and keyword search optimization.
- **Digital Rights Management (DRM) and Publisher Controls:** Granular feature toggles per asset to enable or disable downloading based on publisher copyright rules.
- **Scalability and Concurrency:** Architecture engineered to handle high-volume simultaneous virtual user access across the United States without system latency or performance degradation.

3.2 Custom Modules and Specialized Functionality

Module Name	Functional Requirement	Description and Workflow
Customization A	Physical Book Check-In / Check-Out Request System	A custom portal interface allowing users to search physical book inventory located on-site at the National LNG Center of Excellence facility. Includes automated reservation workflows for physical item check-out/check-in requests and an administrative queue for PHMSA Administrative

Module Name	Functional Requirement	Description and Workflow
		staff fulfillment.
Customization B	Virtual and On-Site Visitor Logging System	An integrated tracking module that logs user check-ins and session visits across both virtual and physical library entry points. Enables PHMSA Administrative staff to maintain accurate visitor logs for institutional reporting.
Customization C	Metrics and Analytics Reporting Module	A comprehensive dashboard enabling PHMSA Administrative staff the ability to track asset utilization (views, downloads, search terms), monitor concurrent sessions, export custom reports (CSV/PDF), and analyze user demographics.

3.3 Technical Architecture, Security and Access Control

- **Hosting and Infrastructure:** 100% web-hosted solution ensuring 99.9% operational uptime.
- **System Maintenance & Support Operations:** Provision of long-term ongoing maintenance and technical support, including regular software/platform updates, routine IT infrastructure maintenance, system performance optimizations, bug fixes, and security patch management.
- **Authentication and Role-Based Access Control (RBAC):** Integration with enterprise Identity Providers (IdP) via SAML 2.0 / OAuth / Single Sign-On (SSO). Permission enforcement structured as detailed below:

User Role	Geographic Scope	Read Access	Download Rights	Physical Book Request	Admin Dashboard
DOT Inspectors / Employees	Remote (US) / On-Site	Yes	Yes (Publisher Permitted)	Yes	No
External Non-DOT Government	Remote / On-Site	Yes	No (Read-Only)	Yes	No
McNeese Students	On-Site	Yes	No (Read-Only)	Yes	No
PHMSA Admin Staff	Unrestricted	Yes	Yes	System Administrator	Full Access

4. Vendor Information Requirements

PHMSA requests that interested respondents provide detailed information on the following sections:

1. **Corporate Overview and Experience:** Brief introduction, relevant qualifications in digital repository implementations, and client references from higher education or government agencies.
2. **Technical Architecture and Solution Design:** Detailed explanation of the proposed platform architecture, web-based environment, security protocols, and concurrency management.
3. **Custom Development Strategy:** Concrete plans for delivering Customization A (Physical Book Request System) and Customization B (Visitor Logging System).
4. **Project Management and Implementation Timeline:** Work breakdown structure (WBS), including key milestones, testing phases, **user training plan and enablement resources**, and final go-live rollout.

5. **Cost Proposal:** Itemized breakdown of costs, including software licensing/SaaS subscription fees, custom module development, web platform hosting and server infrastructure, ongoing technical support, user enablement/training, and routine system maintenance.
