1. Introduction

1.1 Purpose: This contract supports live tactical training essential for preparing the fleet and ensuring the warfighter's readiness for realistic wartime scenarios. The contractor will provide Operational Range Safety at Pinecastle Range Complex, ensuring all users remain within approved range restrictions prior to operational release.

1.2 Scope of Work: The contractor will oversee and execute Range Operations, Access Control, and Range Safety functions. Per the Pinecastle Training Range Matrix, Commander, Naval Air Force Atlantic (CNAL) being accountable for these functions, all required reference documents for contractor created instructions will be provided through applicable USFF, CNAL or FACSFACJAX INST.

2. Scope of Services

2.1 Operational Responsibilities: The contractor will provide operational support for live-fire exercises, including target setup, ensuring personnel awareness of delivery profiles, and maintaining safety throughout training events.

2.2 Range Setup and Maintenance: The contractor is responsible for performing system operational checks, ensuring the availability of necessary support assets, verifying communication systems are functional for range safety, and coordinating with Range System Maintenance and Unexploded Ordnance (UXO) teams on a daily basis.

2.3 Logistical Support: Ensure all Government-owned systems critical to Range Operations remain fully operational. The contractor will report any deficiencies immediately to facilitate timely remediation.

2.4 Safety Management: The contractor will enforce safety protocols for all training events, including maintaining safety zones, ensuring all personnel are trained in safety procedures, and promptly communicating any hazards via range radio.

2.5 Environmental Compliance: The contractor will track and report any environmental requirements, including identifying and reporting dropped dud munitions, fires, and spills, as required.

3. Detailed Tasks and Deliverables

3.1 Preparation and Setup of the Range: The contractor will ensure the range is ready for operation by coordinating with government (NSWC Corona) range system support, validating schedules via Data Collection and Scheduling Tool (DCAST), and confirming all operational systems are functioning.

3.2 Range Operations: The contractor will support scheduled live-fire exercises and other training activities, ensuring strict adherence to safety and operational standards. The primary responsibility of Range Operations is to track personnel movement and facilitate real-time coordination with aircrews.

3.3 Maintenance and Repairs: The contractor will perform routine inspections and promptly report any system issues to NSWC Corona for corrective action.

3.4 Range Safety: The contractor will serve as Range Control, ensuring only authorized personnel access the downrange areas. The contractor ensure that only authorized personnel are permitted access to the range during events.

3.5 Range Safety Observers: The contractor will serve as the onsite RSO on range during training events. Their main responsibility will be to act as the Range Safety down range to ensure the target area is clear

DRAFT

during events, visual contact with users conducting events and as a safety observer for all range personnel.

3.6 Range Access Control: This support will be responsible for ensuring that all personnel are authorized to be onsite and comply with safety protocols during events. Contractor will ensure that all required vetting has been completed and coordinated through FACSFACJAX Security Manager.

4. Performance Objectives and Requirements

4.1 Range Availability: Normal range operating hours are Monday through Thursday, 0800-2200L. Friday is designated for maintenance, providing unhindered access for maintenance personnel. The range will be available outside normal hours as scheduled by the Navy or in support of Major Training Exercises.

4.2 Safety Standards: Safety parameters are established in local policy and instructions. The contractor is responsible for ensuring all safety protocols are adhered to and for reporting any deviations from these standards.

4.3 Regulatory Compliance: The contractor shall comply with all applicable local, state, and federal regulations, including environmental and safety laws. The contractor is required to establish an Operations SOP and Training Program, which must be vetted and approved by FACSFACJAX to ensure compliance.

4.4 Service Levels: The contractor will develop a database to track event support status (supported, partially supported, or unsupported). This will be submitted to the government oversight/COR and will be evaluated accordingly. The QASP specifies acceptable service levels, including setup time, response times for maintenance issues, and reporting metrics.

5. Performance Monitoring and Reporting

5.1 Daily/Weekly Reports: The contractor may be required to submit daily or weekly reports detailing operational status, incidents, and range utilization possibly utilizing DCAST.

5.2 Monthly Reports: Monthly reports will summarize performance metrics, including availability, safety incidents, and compliance status.

5.3 Incident Reports: In the event of safety or operational incidents, a detailed report must be submitted, including root cause analysis and corrective actions.

6. Security and Access Control

6.1 Access Control: The contractor is responsible for managing access to Pinecastle Range, ensuring all visitors are vetted and cleared. The contractor will work closely with the FACSFACJAX Security Manager to confirm that all access requirements are met. Real-time access control to all ranges must be authorized and maintained.

6.2 Emergency Response: The contractor will develop and implement an Emergency Action Plan to address medical emergencies, fires, and security breaches.

7. Key Personnel

7.1 Range Control Lead: This support will be responsible for all the Range Control Specialist and act as the lead POC in all matters in Range Operations. This is a working Lead billet and not a supervisor role.

7.2 Range Control Specialist: Range Control Specialists will also serve as Range Safety Observers. These personnel must be broken into Junior and Senior level billets with enough to cover a Day and Night Shift.

DRAFT

7.3 Qualifications: All Range Control Specialists must be qualified through a government-approved training and certification program. The contractor is responsible for ensuring both initial certification and re-certification are completed as required. Initial hires should possess prior experience with air-to-ground training ranges. Preference should be given to candidates with experience in laser operations, LSSO, and TLSO qualified. Range Control Lead will need to have +5 years experience as a Range Control Specialist, acted as LSSO/TLSO and been RSO qualified.

8. Government-Furnished Equipment (GFE)

8.1 Range Control Specialist Vehicles: The Government will provide GSA vehicles to travel to and from the range during operations. In specific circumstances, government Humvees or other military vehicles may be utilized for range traversal.

8.2 Workstations: The Government will provide workstations for day-to-day operations, to include desktop/laptops, desk phone, ancillary supplies, etc.

9. Quality Assurance Surveillance Plan (QASP)

9.1 Performance Standards: Contractor will be evaluated based on personnel scheduling for training events, ensuring mission readiness, and successful completion of training requirements. Performance will also include evaluating the reliability of range systems and ensuring that incidents due to range system failures are reported. Successful completion of 98% of all scheduled events.

9.2 Inspection and Surveillance: Contractor performance will be assessed based on whether training events were fully, partially, or not supported. Successful completion of 98% of all assessments.

9.3 Performance Metrics: The contractor will develop a performance metric system that includes specific indicators such as incident reports, range uptime, and successful completion of scheduled training exercises then submitted to the government for acceptance.

10. Safety and Risk Management

10.1 Safety Protocols: The contractor will be provided with detailed safety management requirements, including live ammunition parameters, range restrictions, access procedures, and incident reporting protocols.

10.2 Risk Mitigation: The contractor will provide a risk mitigation strategy that identifies, assesses, and addresses potential risks associated with range operations, including accidents, injuries, or property damage

11. Contracting Officer's Representative / Technical POC
